

Does your workplace have 5+ employees that want to quit smoking?

We can bring our quit smoking laser service directly to your workplace and treat employees on site.

Sudbury Laser Health Clinics helps corporate or workplace employees to stop smoking with our cutting edge quit smoking laser therapy.

Smoking in the workplace has always been a problem for employers. It decreases employee productivity and increases absences.

Take a look at these statistics:

- On average, smokers take 3.5 breaks a day to smoke.
- Smoke breaks range from 5 to 15 minutes each, resulting in lost work time.
- Smokers have twice the accident rate of non-smokers.
- Smokers cost employers money for accidental injury and worker's compensation
- On average, smokers miss work 50% more often than non-smokers.
- Many smokers in a company can also increase insurance premiums.

A 2005 study estimated the total cost of secondhand smoke exposure costs \$10 billion annually, \$5 billion in direct medical costs, and \$5 billion in indirect costs such as lost productivity.

Workers have been awarded unemployment, disability and worker's compensation benefits for illness and loss of work due to exposure to secondhand smoke.

SLHC Clinics has a solution for helping your employees to kick the habit.

Our Certified Laser Technicians can transport our mobile laser to your workplace and treat your employees in a designated area of your facility.

The treatment takes approximately 20 minutes per person, but an additional 20 minutes should be allowed to fill out paperwork and provide counseling.

SLHC offers treatment packages for any organization that has 5+ smokers who are ready to quit. Employees can return to work immediately after treatment. Should an employee need a follow up visit, we will provide unlimited Booster for 3 months.
